

TECHNIQUE: Axial i-CAT cone beam dental CT images submitted for evaluation of extradental anatomy. Multiplanar images were reconstructed on the workstation monitor. The field of view includes the mandible and maxilla.

FINDINGS:

No lytic or sclerotic bone lesion. No fracture. No finding to suggest a soft tissue mass. Please note that this technique is not sensitive for detection of soft tissue masses. The visualized paranasal sinuses are clear.

IMPRESSION:

No significant extradental abnormality identified within the imaged field of view.
