Quick Steps: Batch Tool

To use the Batch Tool:

1. Load a study into the Viewer and select the Batch tool.

- 2. Select your Target image
 - a. The Target is the box you want to work from, not what you want to create think of it as a Scout or Topogram Image

Target:	Main view	ſ	<
Type	Main view	1	1
Type	Axial view		
Rendering	Coronal view		
	Sagittal view		
Image Num	12	24	31

3. Choose Parallel under Type

- 4. In the view port of the image you chose as your target, hold left mouse and drag to create a parallel batch.
- 5. Chose rendering mode, spacing, and slice thickness.
 - a. If you want to create an MPR with a different spacing than what is available, choose ThickMPR and you will be able to adjust both Spacing and Thickness

Rendering Mode	MPR MIP	MPR -	Rendering Mode	MPR MIP	MIP
lmage Num	12 24 36	3D VR	lmage Num	12 24 36	« 6
Spacing (mm)	1 3 <u>5</u> 10	» MIP MinIP	Spacing (mm)	1 3 <u>5</u> 10	« 5.0
Thickness (mm)	1 5 8 10 H F	» Thick N	Thickness (mm)	<u>1</u> 5810 H F	« 1.0
FOV	Current Original	»	FOV	Current Original	

6. To rotate the grid, depress the left mouse, click and drag on one of the corners of the grid.

7. To change the width of the grid left mouse click and drag the radial button located on the middle edge of the grid.

8. Chose a location or save as an AVI. To save the batch images, left click on the Output button in the right lower corner.

9. If images were sent to the Output panel, select the Output tab, choose "Send" icon and select a DICOM destination. Images may also be saved to the computer by selecting the "Save" icon
